

A progressive motion verb puzzle in *Valley Zapotec*

Carolyn Jane Anderson

University of Massachusetts Amherst

Round-trip properties of deictic motion verbs

Kuiper & Merrifield (1975): Diuxi Mixtec

Speck & Pickett (1976): Texmelucan Zapotec

Claim: deictic motion verbs (‘come’ and ‘go’) express round-trip paths.

Evidence: progressive-marked ‘come’ and ‘go’ can be used even once the destination has been reached, as long as the subject has not returned to the origin.

Round-trip properties of deictic motion verbs

Evidence: progressive-marked `come' and `go' can be used even once the destination has been reached, as long as the subject has not returned to the origin.

This is true in San Lucas Quiaviní Zapotec (SLQZ):

Ndua z-e Brook.

Oaxaca ZPROG-go Brook

`Brook went to Oaxaca.'

Comment: She may be on her way, in Oaxaca, or on her way back, but she hasn't returned to San Lucas.

Round-trip behavior of motion verbs

Round-trip properties of deictic motion verbs

Round-trip Claim:

deictic motion verbs
have round-trip
interpretations
because the lexical
semantics of the verbs
express round-trip paths.

My Claim:

round-trip interpretations
of deictic motion verbs
arise through an
interaction with the
special z-progressive
aspect marker.

San Lucas Quiaviní Zapotec

- ❖ Western Tlacolula Valley Zapotec language (Otomanguean)
- ❖ Spoken in the village of San Lucas Quiaviní in Oaxaca, Mexico
- ❖ Endangered and underdocumented (Pérez Báez 2016)
- ❖ Data presented comes from fieldwork with eight speakers in the village of San Lucas in 2016 and 2017, as well as textual sources such as Munro et al. (2006), Munro & Lopez (1999), and online writings of SLQZ speakers (Lillehaugen 2016) where cited.

SLQZ Syntax

aspect (morph) root subj. clitic

r- ied -tau =a

HAB VEN eat =1s

'I habitually come and eat'

SLQZ Aspect Inventory (Munro et. al 2006)

Morpheme	Gloss	Description
b- / m- / w-	PERF	perfective
ca- / cal- / can-	PROG	progressive
g- / ny- / y-	IRR	irrealis
n-	ST	neutral / stative
r-	HAB	habitual
s- / z-	DEF	definite future
z-	ZPROG	progressive for motion

The z-progressive aspect

SLQZ deictic motion verbs can't take the normal ca- progressive aspect; instead they use z-.

Lee (2006) calls it **non-future definite** and analyzes it as a positive polarity item.

Munro (2007) calls it **incompletive** and presents evidence that it is not the same as the definite future z- aspect.

SLQZ motion verbs

3 deictic motion verbs in SLQZ:

- ❖ *ried* `come'
- ❖ *ria* `go'
- ❖ *ria* `go home'

Perspectival anchors

Deictic motion verbs describe motion relative to the location of a **perspective-holder** or **anchor**.

Speaker-anchored: Sarah is coming to see me.

Listener-anchored: I will come over around noon.

Attitude-holder-anchored: John thought that Sarah was coming to see him last week.

Context: John is in NY, the speaker and addressee are in LA.

Perspectival anchors

Perspectives are also time-indexed:

Utterance-time-anchored: Come here, please!

Event-time-anchored: When I got to the cafe last night, it was packed, but by the time Wilma came, it was nearly empty.

Context: the speaker is in her office talking to her officemate.

Perspectival anchors

Not all of these attested perspectival anchors
license ried 'come' in SLQZ:

R-rilo **Jwany a** **bets=ëng** **a**

HAB-think Juan **already brother=3s** **already**

z-e/*ied-gan **laëng**

ZPROG-go/*come-visit 3s

John thinks that his brother is on the way to visit him.

Context: speaker and listener are not in the same place as John.

Destination implication

The destination of motion does not need to be the location of the perspective-holder, so long as the motion is towards the perspective-holder.

R-inydyag=a ai nih r-to ze z-ied
HAB-hear=1s 3s.dist REL HAB-sell corn ZPROG-come
lo=ën
to=1p

‘I hear the man who sells corn coming towards us.’

Context: the man is coming towards us, but not to us—he’ll continue on his route after passing us.

Semantics of deictic motion verbs

Semantics for *ria* 'go':

$[[ia\ Jwany]]^{w,c} = \lambda e. \exists p,z,y . Motion(e) \ \& \ Path(p,e)$
 $\ \& \ Origin(p,y) \ \& \ Dest(p,z) \ \& \ Patient(J,e)$

Semantics for *ried* 'come':

$[[ied\ Jwany]]^{w,c} =$

(a) $\lambda e. \exists p,z,y . Motion(e) \ \& \ Path(p,e) \ \& \ Origin(p,y)$
 $\ \& \ Dest(p,z) \ \& \ Patient(J,e)$

(b) *J* is moving towards the perspective-holder

Round-trip behavior of SLQZ motion verbs

Aëng z-e ladi per daru
3s ZPROG-go side but then

gy-i=ëng

FUT-come=3s

‘He went to the US but he’s coming back.’

Judgment: felicitous if the subject is on the way to the US, already arrived, or on his way back.

Round-trip behavior of *zia*

Round-trip behavior of SLQZ motion verbs

A **Brook** **z-e** **Bac**
already Brook ZPROG-go Tlacolula
asy wxiny gy-icy=ëng
later evening FUT-return=3s

‘Brook went to Tlacolula and is returning tonight.’

Context: Brook left in the morning for Tlacolula and is returning that same day.

Round-trip behavior of SLQZ motion verbs

Speaker judgments about *ried* 'come' are less clear:

A Bed n-u re' z-ied-gan
already Pedro ST-be here ZPROG-VEN-visit
danoën
1p

Intended: 'Pedro is already here and he is coming to visit us.'

Context: Pedro has traveled from Oaxaca City to San Lucas.

Round-trip behavior of SLQZ motion verbs

Speaker judgments about *ried* 'come' are less clear:

Z-ied **Gye'eihlly** **laanih**
ZPROG-come **Mike** **party**
`Mike came/is coming to the party.'

Reported judgment (Lee 2006): He's either on his way, or has just arrived but not yet started participating in the party

Round-trip behavior of *zied*

Round-trip properties of deictic motion verbs

Round-trip Claim:

deictic motion verbs
have round-trip
interpretations
because the lexical
semantics of the verbs
express round-trip paths.

My Claim:

round-trip interpretations
of deictic motion verbs
arise through an
interaction with the
special z-progressive
aspect marker.

SLQZ motion verbs are not round-trip

There is no round-trip implication in other aspects:

gw-e xtadmam=a ladi lo 1983.

PERF-go grandfather=1s side in 1983

‘My grandfather went to the US in 1983.’

Context: he died there without ever returning.

SLQZ motion verbs are not round-trip

There is no round-trip implication in other aspects:

gw-a=a Bac a's chiru gwa=a
PERF-go=1s Tlacolula then and PERF-go=1s
Ndua
Oaxaca.City

‘I went to Tlacolula, then I went to Oaxaca City.’

Context: Speaker traveled from San Lucas to Tlacolula and then directly to Oaxaca.

SLQZ motion verbs are not round-trip

There is no round-trip implication in other aspects:

b-yal=a de US a nai
PERF-come=1s from US already yesterday

‘I came from the US yesterday.’

Context: the speaker arrived in Oaxaca for the first time the day before.

SLQZ motion verbs are not round-trip

There is no round-trip implication in other aspects:

Ladi ch-a=a zhi.

side IRR-go=1s day

‘I’m going to the US tomorrow.’

A gual gy-i=u.

MOD IRR-go=2s

‘It’s time for you to go.’

SLQZ motion verbs are not round-trip

✓ gia

✓ bield

The semantics of the z-progressive

The z-progressive isn't an ordinary progressive marker: it requires that a result state of the predicate holds at Topic Time.

$$[[\text{ZPROG}]]^{w,c} =$$
$$[\lambda P_{\langle e,t \rangle} : [\lambda t'_i : \exists e,s. \text{Cause}(e,s) \& t \subseteq T(s) \& P(e)]]$$

A function from predicates of type $\langle e,t \rangle$ to predicates of type $\langle i,t \rangle$ for which there is an event e of which the predicate holds and a state s holding at Topic Time that is caused by e

The semantics of the z-progressive

The z-progressive requires that a result state of the predicate holds at Topic Time.

[[ZPROG]]^{w,c} =

$[\lambda P_{\langle \varepsilon, t \rangle} : [\lambda t'_i : \exists e, s. \text{Cause}(e, s) \& t \subseteq T(s) \& P(e)]]$

Captures the fact that the z-progressive can be used even when the event it modifies is no longer under way.

The semantics of zia

$[[\text{ia Jwany}]]^{w,c} = \lambda e : \exists p, z, y . \text{Motion}(e) \ \& \ \text{Path}(p,e) \ \& \ \text{Origin}(p,y) \ \& \ \text{Dest}(p,z) \ \& \ \text{Patient}(J,e)$

$[[[\text{ZPROG}]]^{w,c} = \lambda P_{\langle \varepsilon, t \rangle} : [\lambda t'_i : \exists e, s . \text{Cause}(e,s) \ \& \ t' \subseteq T(s) \ \& \ P(e)]]$

$[[[\text{zia Jwany}]]^{w,c} = \lambda t'_i : \exists e, s, p, z, y . \text{Cause}(e,s) \ \& \ t' \subseteq T(s) \ \& \ \text{Motion}(e) \ \& \ \text{Path}(p,e) \ \& \ \text{Origin}(p,y) \ \& \ \text{Dest}(p,z) \ \& \ \text{Patient}(J,e)]$

Round-trip behavior explained

Round-trip behavior explained

Aëng z-e ladi per daru gy-i=ëng
3s ZPROG-go side but then FUT-come=3s

‘He went to the US but he’s coming back.’

Judgment: felicitous if the subject is on the way to the US, already arrived, or on his way back.

Predicted to be felicitous so long as the result-state of having left holds.

Round-trip behavior explained

De'ihzy z-a=a

just.now ZPROG-go=1s

'I just left [the party].'

De'ihzy zaa

The semantics of zied

$[[\text{ied Jwany}]]^{w,c} = (a) \lambda e. \exists p,z,y . \text{Motion}(e) \ \& \ \text{Path}(p,e)$
 $\ \& \ \text{Origin}(p,y) \ \& \ \text{Dest}(p,z) \ \& \ \text{Patient}(J,e)$
(b) J is moving towards the perspective-holder

$[[[\text{ZPROG}]]^{w,c} = \lambda P_{\langle \varepsilon, t \rangle} : [\lambda t'_i : \exists e,s. \text{Cause}(e,s) \ \& \ t' \subseteq$
 $T(s) \ \& \ P(e)]]$

$[[[\text{zied Jwany}]]^{w,c} = (a) \lambda t'_i : \exists e,s,p,z,y. \text{Cause}(e,s) \ \&$
 $t' \subseteq T(s) \ \& \ \text{Motion}(e) \ \& \ \text{Path}(p,e) \ \& \ \text{Origin}(p,y)$
 $\ \& \ \text{Dest}(p,z) \ \& \ \text{Patient}(J,e)]$
(b) J is moving towards the perspective-holder

Round-trip behavior explained

Round-trip behavior of SLQZ motion verbs

Z-ied Gye'eihlly laanih

ZPROG-come Mike party

`Mike came/is coming to the party.'

Reported judgment (Lee 2006): He's either on his way, or has just arrived but not yet started participating in the party

Predicted to be felicitous until the subject has reached the perspective-holder's destination.

Round-trip behavior explained

A Bed n-u re' z-ied-gan
already Pedro ST-be here ZPROG-VEN-visit
danoën

1p

Intended: `Pedro is already here and he is coming to visit us.'

Context: Pedro has traveled from Oaxaca City to San Lucas.

Predicted to be felicitous until the subject has reached the perspective-holder's destination.

Change-of-state venitive constructions

The result-state semantics of the z-progressive aspect suggests an explanation for a special reading that arises with z-progressive-marked venitive constructions.

Venitive construction:

Rata rsily r-ied-tyug Lia Petr gyia.

Every morning HAB-VEN-cut Miss Petra flowers

‘Every morning Petra comes and cuts flowers.’

Change-of-state venitive constructions

Andative and venitive constructions usually entail actual motion, but z-progressive venitive constructions give rise to change-of-state readings.

Gu-ro=ëng.

PERF.AND-grow=3s

Intended: 'He went and grew up.'

Infelicitous because there is no motion

Ladi gu-ro=ëng.

side PERF.AND-grow=3s

'He went and grew up in the States.'

Felicitous because there is motion

Change-of-state andative constructions

Andative and venitive constructions usually entail actual motion, but z-progressive venitive constructions give rise to change-of-state readings.

Gu-ro=ëng.

PERF.AND-grow=3s

Intended: 'He went and grew up.'

Infelicitous because there is no motion

Uas nguel z-ied-ro=ëng.

very fast ZPROG-VEN-grow=3s

'He's growing up very fast!'

Felicitous despite lack of motion

Conclusion

- ❖ The SLQZ z-progressive aspect has a **result-state semantics**
- ❖ SLQZ deictic motion verbs **do not denote round-trip paths**
- ❖ Perhaps deictic motion verbs in other Otomanguean languages don't either!
